

4.1 Baseline check — progress across seeds

Does the baseline keep improving within the generation budget?

Target: flag_100.png | Budget: 300 generations | 50 triangles | Population: 30 | Selection: Elite | Crossover: One-point

Each line is a different seed using the SAME configuration, not a different method. A falling line means improvement; a flat line means no new best solution. Separated lines show variation between runs.
